

Paton's excellent reputation for innovation, responsiveness, flexibility, and quality has also created a strong foundation of repeat clients.

Paton has established supplier of choice arrangements with a select group of companies; a direct result of our strong focus and commitment to developing and maintaining client relationships.

Paton's capabilities include the service of a full range of business sectors, services, and disciplines including:

- | | |
|-----------------------------------|-----------------------|
| Refining | Petrochemicals |
| Power & Utilities | Pipelines |
| Brewing, Food and Beverage | Pharmaceutical |

Paton has maintained a reputation for excellence by providing innovative, high quality, and cost effective engineering/design, process automation controls & project services since 1984.

To ensure Paton's continued project and services excellence we employ the latest innovative technologies, design methods, work practices and state-of-the-art tools throughout our company. Our Houston, Oakville, Sarnia, and Southeast Texas offices are interconnected in a virtual office space, which allows us to respond quickly and efficiently to project requirements by sharing our expertise and available resources.

At Paton, we have consistently proven our ability to work in an effective, flexible, and cooperative team environment. We believe in this approach and have seen the breakthrough results that working in an integrated team environment can bring.

Paton designed facilities have an outstanding record with respect to start-up to performance through project management. We have executed both small and large projects in the United States, Canada, and overseas. We provide the best cost-efficient and cost-effective service possible and work to the clients' requirements; they do not have to adjust to ours. Our client's success is our success.

Engineering

Paton offers industry leadership, effectiveness, and innovation in front-end and detailed engineering services. We focus on quality and reliability in design, safety and constructibility thus ensuring long-term viability and maintainability of completed projects.

- Instrumental/Electrical
- Mechanical
- Piping
- Civil
- Structural

Project Mgmt.

Leadership, effectiveness, and Innovation.

Paton strives to ensure customer satisfaction through the commitment to, and implementation of, a formal quality management system. Paton's project management system is based upon the development and use of Paton procedures to provide a consistent approach in identifying and satisfying our customer's technical, commercial, and quality requirements.

Our Project Managers have an average of over 15 years of experience on some of the most complex engineering and construction jobs ever undertaken. We know how to manage all aspects of even the most complex project, from engineering to procurement to construction and completion. We also are experts at resolving conflicts and identifying issues before they become problems. Our teams focus on the overall picture, establishing priorities and coordinating activities and participants to ensure quality projects that are delivered safely, on time, and within budget.

Construction Mgmt.

Paton's management group assists in meeting short and long-term needs by providing the necessary personnel and expertise to get the job done right - on time and under budget. Our personnel are industry professionals with hands-on field experience and working knowledge in planning, design, procurement, material handling/control, construction and installation.

By providing any level of service on your behalf or by supporting your construction management team, your project will be greatly benefitted from our vast project expertise.

Automation & Controls

Automation & Control is one of Paton's core competencies. Paton's process controls group has expertise, knowledge and experience in the engineering, specification and implementation of control, automation and information systems. Networks have become the common highway for connectivity and data transport between local and remote sites. Networks now provide the infrastructure for computer networks, distributed control systems (DCS), and security applications. This has created an opportunity to see efficiencies in infrastructure design and implementation of advanced technologies in a variety of architectures.

We can execute projects of virtually any size and scope including grass roots plants, revamps, control upgrades and enterprise application integration/development. These projects will be supported by a versatile staff of engineers and designers with diverse backgrounds in the disciplines of electrical, control, instrument and software engineering.

Paton takes an independent approach to control and automation projects. First, our broad experience allows us to understand the process. Then, by utilizing a structured analysis approach we can define the problem and the client requirements to provide the best "fit-for-purpose" solution.

Leadership. Effectiveness. Innovation.

Our core competency experiences include, but are not limited to, the following:

- Risk Assessments
- Front-end Engineering & Design
- Feasibility Studies
- Start-up Commissioning
- Controls Integration
- Operator Training
- Procurement
- Control Strategy Development & Implementation
- Safety Instrument Systems Design & Implementation
- Plant Electrical Studies
- Process Design & Development
